

The European Centre of Excellence BEYOND for Earth
Observation based monitoring of Natural Disasters in
South-Eastern Europe

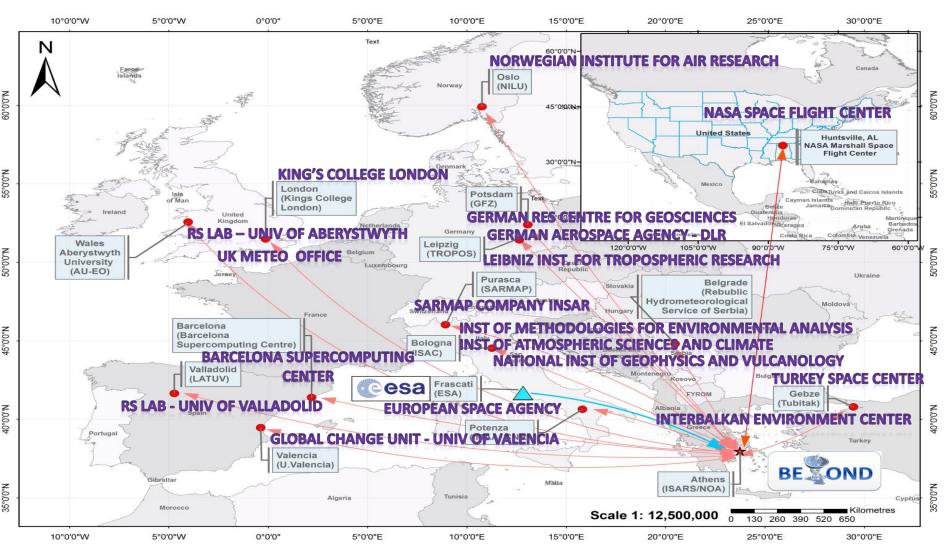

Building a Centre of Excellence for EO-based monitoring of Natural Disasters

Funded under FP7-REGPOT-2012-2013-1
Activity: 4.1 Unlocking and developing the research poter research entities established in the EU's Convergence regions

- ➤ **BEYOND** aspires to setting up innovative solutions for EO, allowing to a multitude of monitoring networks (space borne and in-situ) available over the region to operate in a complementary, unified, and coordinated manner
- **BEYOND** builds innovative research and skills capacity in the domain of EO through scientific exchange with European and regional partnering organisations
- ➤ BEYOND transforms the observations to added value products ready for down-streaming to specific societal needs in the domain of environmental monitoring and Natural Disasters
- **BEYOND** delivers online observations and higher level EO products and services to stakeholders, and international scientific and End User communities

 Funding: 2.3 MEuros EC Contribution

Funding: 2.3 MEuros EC Contribution **Additional funding** from Structural Funds ~270KEuros

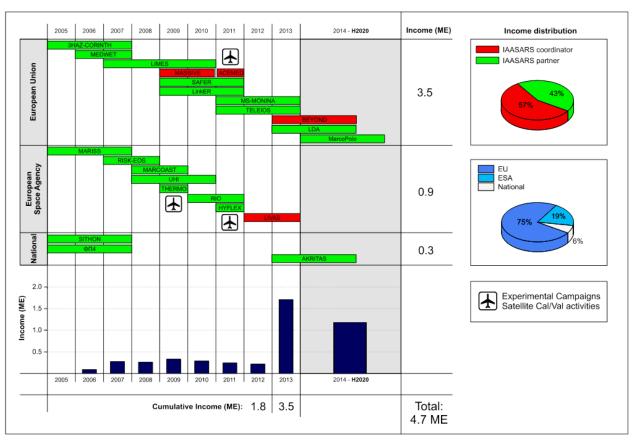

LDA Large-scale demonstrators in support of GMES and GNSS based services in Athens, Greece, GMES/DG ENTR

MASSIVE: Mapping Seismic Vulnerability and Risk of Cities, European Commission - DG ENV A.3 – Civil Protection

TELEIOS—Virtual Observatory Infrastructure for Earth Observation Data, FP7-ICT-2009-5

LIMES (Land and Sea Integrated Monitoring for European Security/GMES / EC DG Enterprise

LinkER - Supporting the implementation of an operational GMES service in the field of emergency management, Invitation to Tender No: ENTR/08/028

SAFER – EMERGENCY: Building Emergency Response Core Service, FP7-2007-SPACE-1/ GMES Collaborative Project

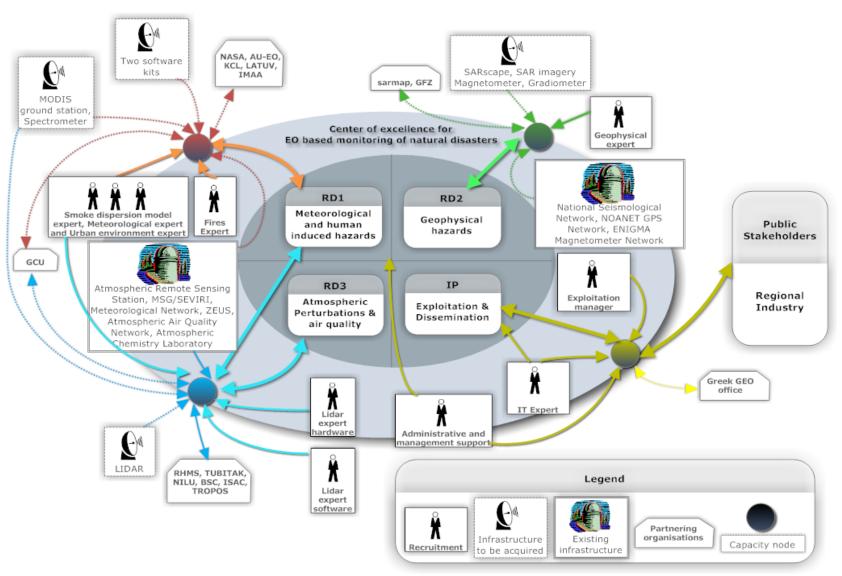

RISK-EOS Extension to Greece - Promotion of the GSE RISK-EOS fire services portfolio in Greece, EarthWatch GMES Services Elements, ESA/GSE

MARCOAST/ISSUE-OS - Integrated system for suspect vessels emergency tracking – OIL SPILLS

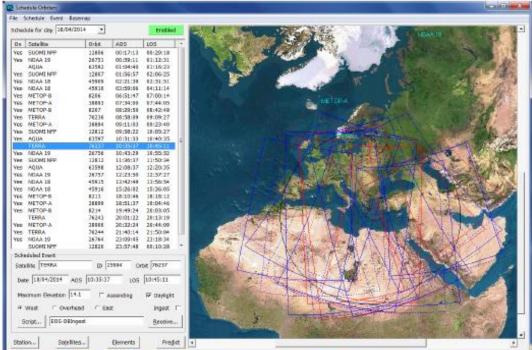

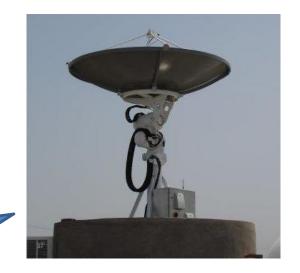

Setting up integrated satellite based observational solutions

➤ X-/L- band acquisition station for (EOS Aqua and Terra, NPP, JPSS, NOAA, Met Op, FengYun) (part of the DB network)

IAASARS/NOA X-/L-band Acquisition station

Setting up integrated satellite based observational solutions

- ➤ MSG SEVIRI acquisition stations of DVB-S & DVB-S2 systems exploiting high throughput provided with the new EUMETCast Europe service, based on using the EUTELSAT 10A (part of EUMETSAT's network)
- ➤ Access to NOA's in-situ monitoring seismological, magnetometer, and GPS networks

IAASARS/NOA MSG SEVIRI Acquisition station DVB-S2

➤ Develop and Operate of NOA's Collaborative Ground Segment (Hellenic Sentinel Data Hub-

Activity in the framework of the

COPERNICUS PROGRAM

The EUROPEAN EARTH OBSERVATION FLAGSHIP

PROGRAM (EU/ESA)

http://www.copernicus.eu/

SciNetNatHazPrev - XANTHI, 6 October 2015 - ΔΗΜΟΚΡΙΤΕΙΟ ΠΑΝ ΘΡΑΚΗΣ

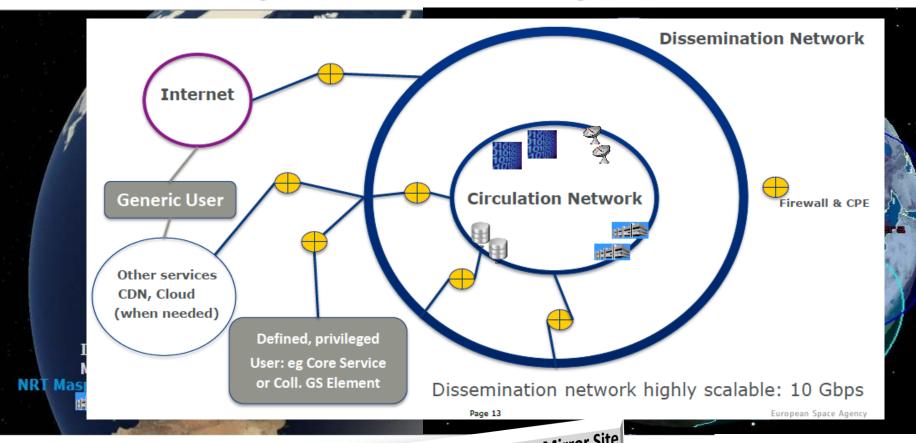

- a GSC Core Ground Segment, with GSC-funded Functions and Elements, providing:
 - the primary access to Sentinel Missions data as well as
 - the coordinating access functions to Contributing Missions data

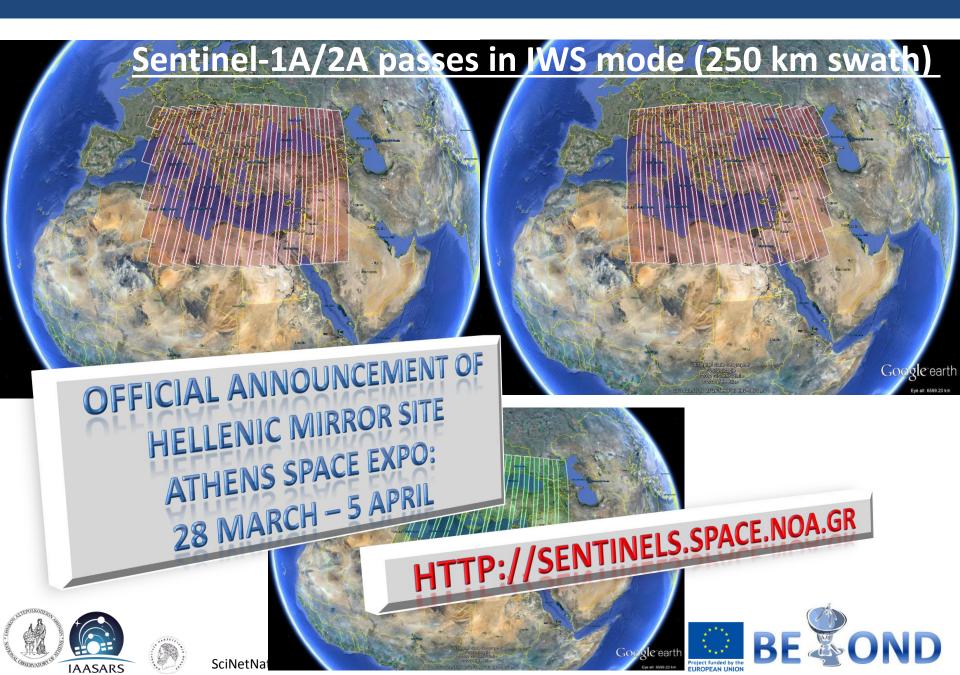

Development of a state-of-the-art multi-wavelength lidar to be installed in Crete (FKL), in the framework of the BEYOND project, part of the EARLINET network.

"FireHub: A **Space Based Fire Management** Hub "

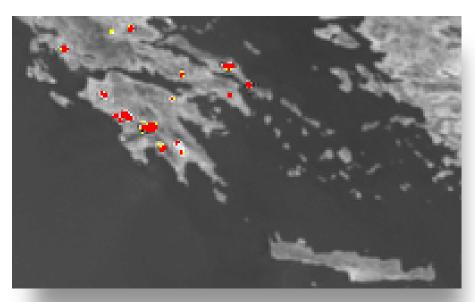

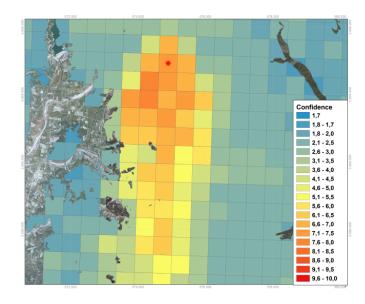

"FireHub: A Space Based Fire Management Hub"

The service consists of three pillars:

- 1. The real-time fire detection and monitoring application
- 2. The large scale Burnt Scar Mapping during and after wildfires and the Diachronic BSM
- 3. The fire smoke dispersion forecasting tool

Raw resolution: 3.5x3.5 km wide pixel over entire

Refined resolution: 0.5x0.5 km wide pixel over entire Greece

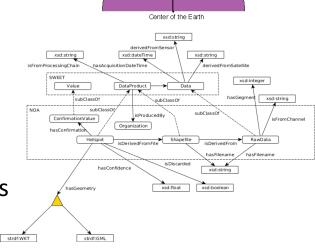

CLASSIFICATION PROCESS

Classification #1: The EUMETSAT Fire mapping algorithm (FIR) based on fixed thresholding approach, applied on the spectral bands IR 3.9 and IR10.8.

Classification enhancement # 1: The thresholds are dynamically changing calculated for each image and every pixel location on the basis of the seasonally variations and time depended Solar Zenith Angle.

Classification enhancement # 2 : Create and integrate classification evidence through geo-spatial ontology schemes and reasoning queries, accounting for the

- a) thematic consistency by eliminating false alarms, and
- b) account for the time persistence of the fire observations

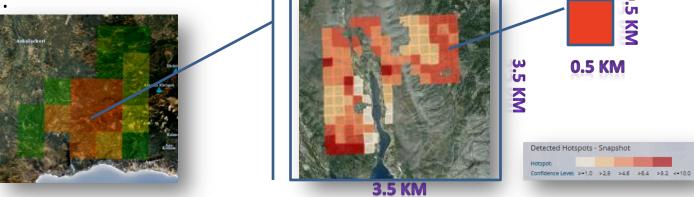

CLASSIFICATION PROCESS

Classification enhancement # 3: Downscaling the first classification output and calculate the fire occurrence probability in sub-areas of 500 m x 500 m wide, inside the initial observation area of 3.5km x 3.5 km, accounting for the real meteorological, physical / ecological, and morphological conditions in the affected area such as,

a) Wind conditions (speed/direction), b) Fuel types and fuel type's proneness to fire, c) Altitudinal zone, d) Slope and Aspect elements of each of the 500m

x500m area.

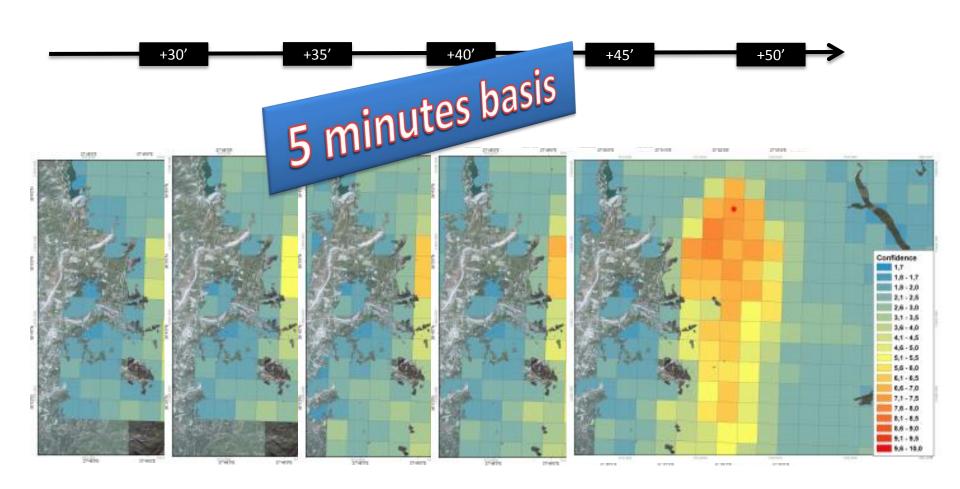

Regional Real Time Fire Monitoring - NOA's MSG SEVIRI Station

SEVIRI MIR 070823_1030 UTC

POTENTIAL FIRE CONFIRMED FIRE

Results @ 150 minutes after fire ignition

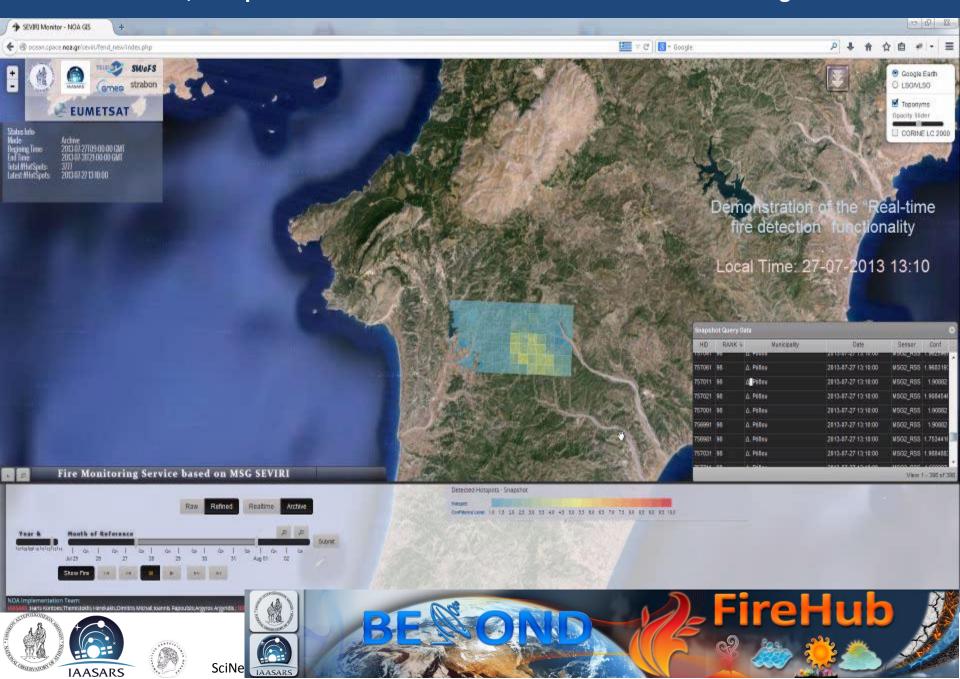

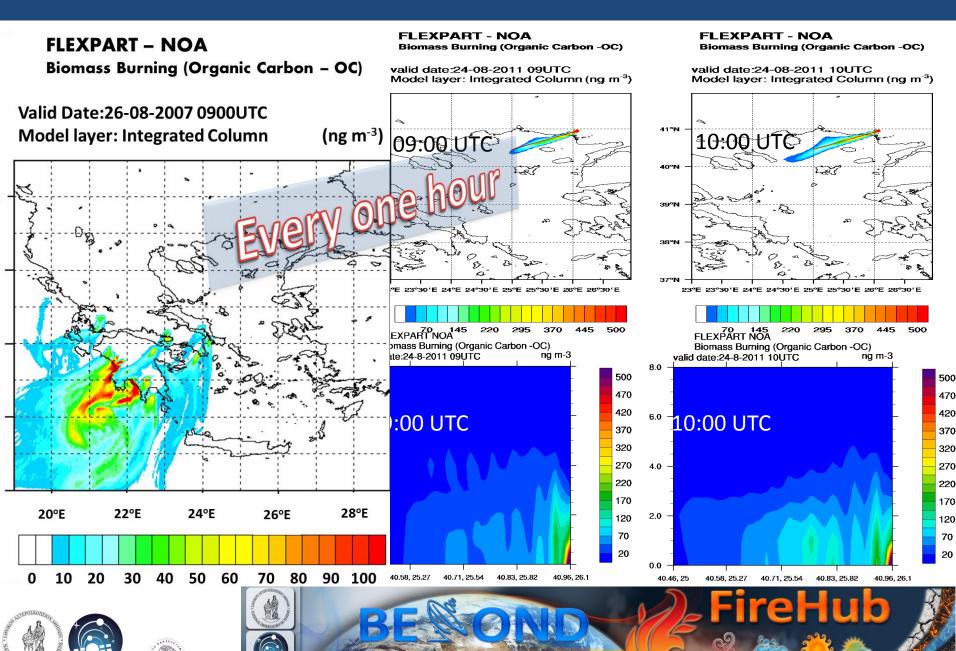

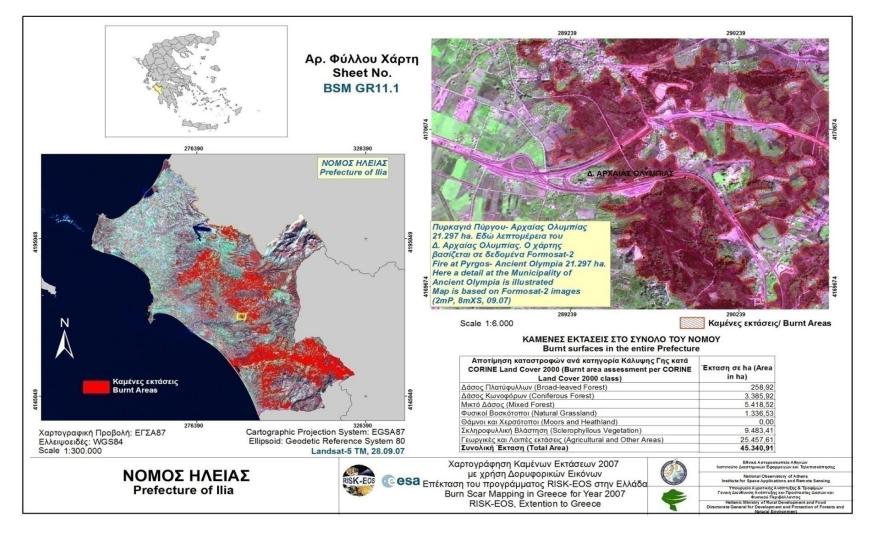

IAASARS

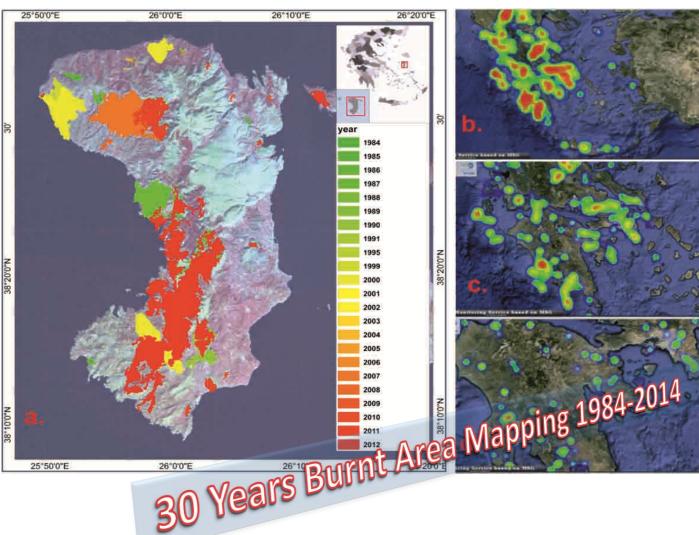

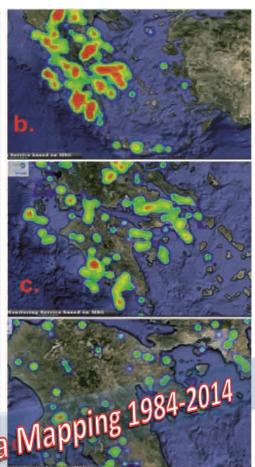

- 1) More than 650 Landsat TM images acquired over Greece in the period 1984-2013 residing on USGS archives were downloaded and processed fully automatically using the NOA processing chain.
- 2) Yearly maps of Burned Areas have been produced
- 3) Yearly statistics per land cover type and administrative data have been generated
- 4)On-line dissemination of the produced maps and statistics through the NOA's dedicated web interface

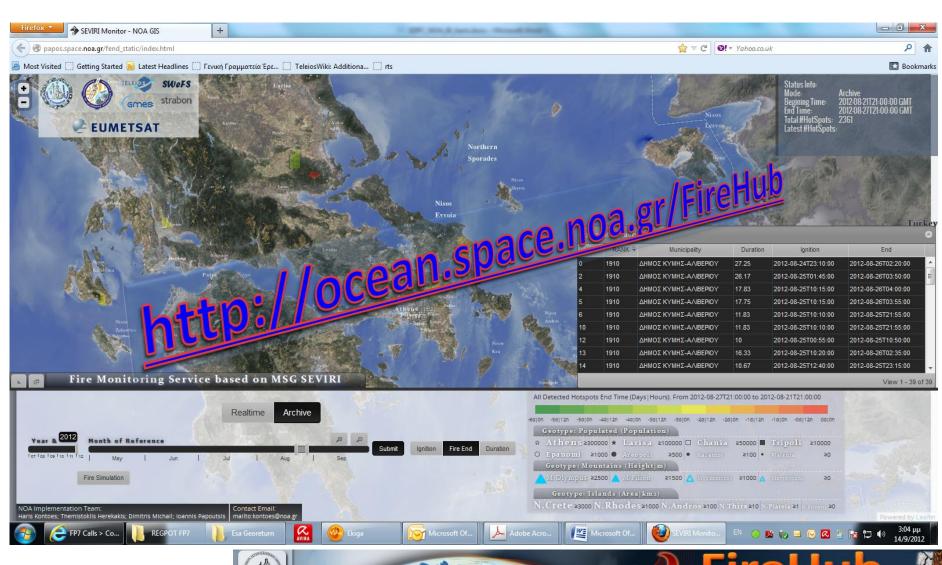

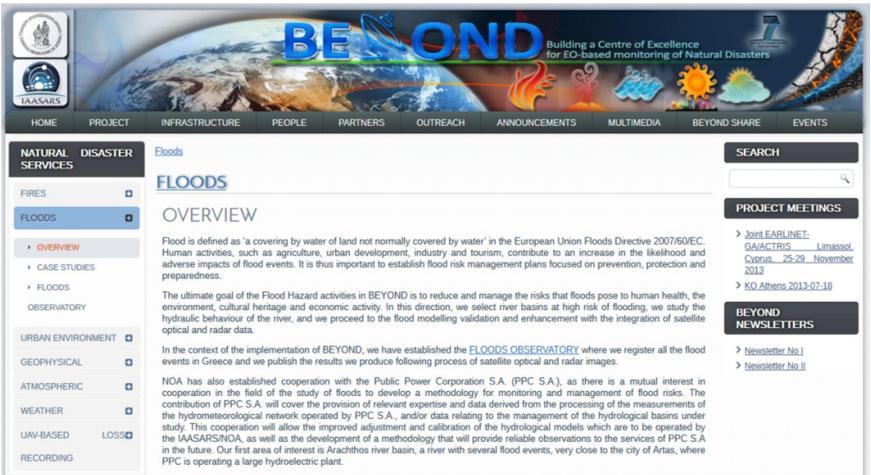

BEYOND for flood monitoring

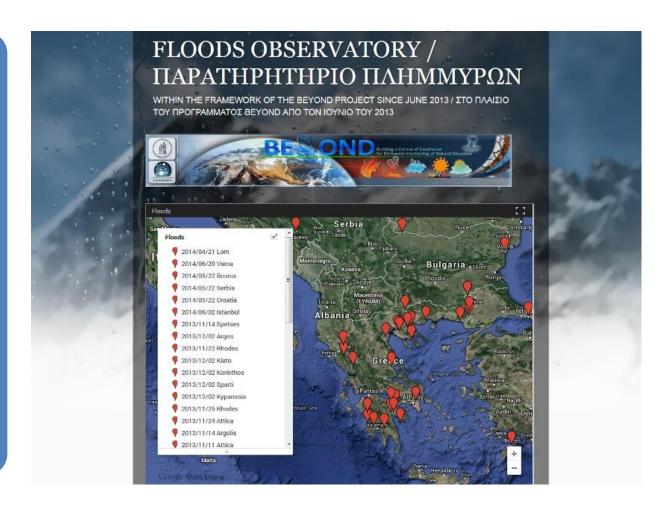

We have established the BEYOND Floods
Observatory
where we register all the major flood events in Greece and South-Eastern Europe.

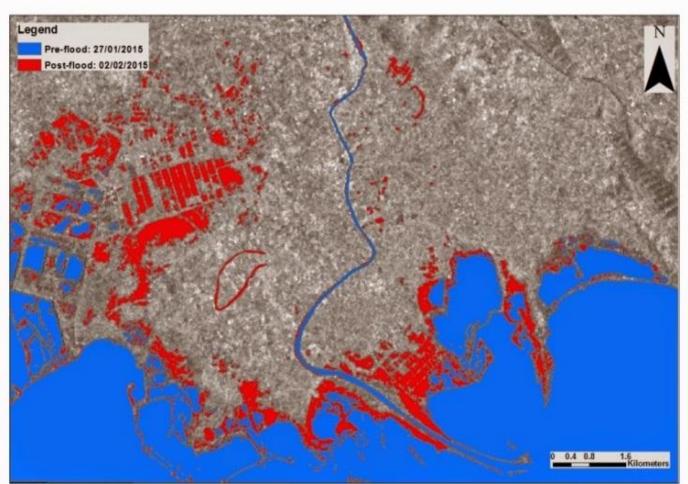

BEYOND NRT Flood Extend Assessment

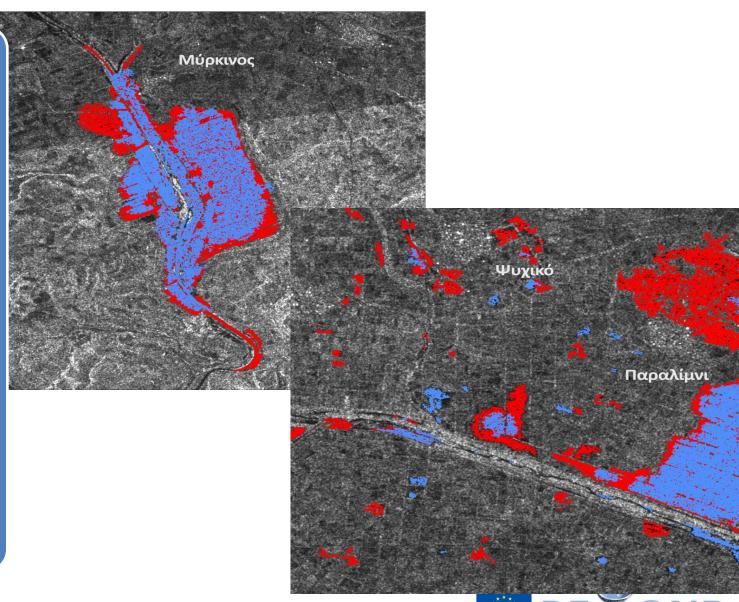

Sentinel-1 based flood monitoring and mapping service in BEYOND Floods Observatory

April 2015 flood extent maps in North Greece produced by automatic ingestion and processing of satellite radar images in RT

BEYOND Floods Early Warning System

This cooperation allows the improved adjustment and calibration of the hydrological and hydraulic models which are operated by NOA, as well as the development of a methodology that will provide reliable products and services to PPC S.A.

CASE STUDY:

The first case study is the river basin of Arachthos, a river with several flood events, upstream of the city of Arta, where PPC S.A. is operating two hydroelectric plants: 1) a large one known as Pournari I (effective capacity of reservoir 303 million m³) 2) a smaller one known as Pournari II (effective capacity of reservoir 4 million m³).
